Coming Soon to a City Near You

After five and a half years our family is back on US soil once again. We are so anxious to reconnect with family and friends we haven't seen in so long. We are thankful that many of our churches have already contacted us to schedule some time with us in the coming months. If you don't see your church listed in the schedule below please contact us to arrange a time when we can visit your church and share with you the work of the Ap Ma Project in Papua New Guinea.

New Faces in the Clinic

Just two short weeks before leaving for our trip to the USA, Caleb and Dorothy Aua (center) joined our clinic staff as probationary CHW's. We are so pleased they have come to assist Wona and Eva (Right and Left) who have been working tirelessly to keep up with the high patient load. Now that they have some extra helping hands to keep up with the patients they are hoping to catch up on some of the lab work. Perhaps they will even get out into some of the distant communities to provide vaccines for those who have not come to see us recently at the clinic for baby check ups. Please pray for a smooth transition into the community and work setting.

The Ward is Operational

The last few weeks have been really busy ones. As we anticipate our upcoming trip to the USA, we have been trying to get things in order for the time we will be absent. This is can be very trying. Especially when you are attempting to do the 'average' day to day things, as well as looking ahead. From the technical services side it's been a very exciting time. We have been working since late October of 2021 to get the new ward usable. Despite the interruptions we were able to get the new tile floor in, walls up, electrical (wiring/lights/receptacles) installed, and plumbing completed. The ward went from being a shell to a usable space. This is really going to make the medical treatment of patients so much better.

We have also begin prepping the timber and brought in supplies for the new FODE classroom. We were able to get some of the framing done before we left. It gives Karie and the students the ability to see the space and what its going to be like soon.

Speaking of changes, with a new VSAT installed for satellite internet, Karie has taught the FODE students to open email accounts and do various work online. This means that while we are overseas the students will be able to keep in contact with Karie and she will be able to grade lessons, as well as upload lessons of her teaching!

My how things have changed in Samban in the last 18 years. It has been so nice to have internet and be able to video call our family back in the USA almost anytime we want. Such a HUGE blessing!

We may be coming soon to a city near you! Check out our schedule above.

A view on the river as we travel back to Samban in the late afternoon.
